

Connect AI-Powered Salesforce Development to Governed Delivery

Bring Salesforce context, testing and release control into the tools where developers and AI agents already work.

AI accelerates the creation of Apex, Flows, Lightning components and metadata. Getting those changes into production still requires an understanding of org dependencies, regression testing and controlled promotion across environments.

Agentia Headless is the interoperability layer of Agentia by Copado. Through CLI, MCP and Skills, agents can operate Copado while developers stay in their IDE. Existing pipelines, testing and governance remain intact.

Copado Delivery

Test → Govern → Release

Ground agents in the Salesforce org

Org Intelligence brings metadata, dependencies, test results and change history into context. AI Context Hub connects that context to AI workflows, helping agents understand the environment they are changing. Agentia Headless gives them the tools to act through the governed delivery lifecycle.

Four ways to connect

1 CLI | Execute

Work with stories, tests and promotions through commands for developers, agents and automation.

2 MCP | Connect

Expose authenticated, discoverable Copado tools to agents through Model Context Protocol.

3 Skills | Guide

Give agents Copado playbooks with workflow sequencing, context and guardrails.

4 IDE extension | Stay in control

Keep stories, jobs and test activity visible in the development environment.

Extend your Salesforce marketplace

Connect creation to release.

Give customers a path from AI-assisted Salesforce changes to validated, controlled production delivery.

Build quality into the workflow.

Run automated tests and quality gates to identify regressions before promoting changes.

Retain delivery control.

Keep approvals, traceability and established pipelines as agents take on more of the work.

Bring Agentia Headless Into Your Ecosystem

Connect your Salesforce marketplace or AI platform to org-aware, governed delivery. Explore an Agentia Headless workflow from Salesforce change through testing and promotion.
